From: Nick Johnson, Product Manager, Bioprocessing
Subject: AseptiQuik® Products – Final Letter for AseptiQuik S
Recommended Action: Review this Letter. For Informational Purposes Only.
Date: July 31, 2017

CPC is making a product feature enhancement to the AseptiQuik products. The feature includes a visible laser-etched part and batch number and data code (a 2D data matrix bar code) directly on to the AseptiQuik Connector. The data code can be scanned with a wide variety of QR code scanners, data matrix scanners or a bar code scanners. When the code is scanned, the user also sees the part and batch number, the manufactured date of the connector and a product-specific URL.

By clicking on the URL, the user has access to additional product-specific technical data and specifications on materials, pressure and temperature ratings, sterilization compatibility as well as product-specific videos showing assembly steps and best practices. Other resources available through the URL provided by the data code include a validation report request option and an “Ask an Engineer” link for questions.

There will be no change to the design or functionality of the connector itself.

The below part numbers will be affected by this change. **Catalog part numbers and certifications will not change** as a result of adding the information on to the part.

The enhancement will be in effect starting with batch number 3817750 for the below items.

AQS17MPC	AQS17002HT
AQS17MPCHT	AQS17004
AQS33012	AQS17004HT
AQS33012HT	AQS17006
AQS17002	AQS17006HT

For a closer look at the Data Code enhancement, please check out the feature overview video [here](#). Please don't hesitate to contact me directly at nick.johnson@cpeworldwide.com with any questions.
